

AI-driven video analytics
with real-time event alerts

REMARK 

Executive Summary 2023

To keep pace with changing market dynamics for strategic decision making, we turn video content into actionable intelligence at scale, with unrivalled accuracy.

Our award winning AI models and video analysis increases the safety of any environment, and the operational efficiency of both private and public sector organisations. Our video analytics works with existing video or CCTV systems to keep workers, spaces and valuable assets safe along with buildings secure.

Managing video surveillance operations has historically been a labor-intensive process, requiring manual intervention to record 'events'.

Integrating the Remark AI models into an existing video infrastructure enhances the safety, security and identification of people, assets and buildings with increased accuracy and speed without additional financial costs.

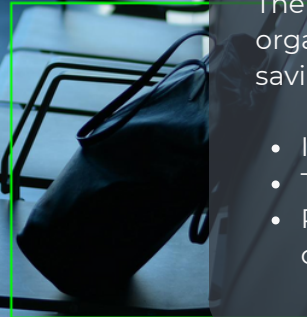

Leaders in video analytics with award winning AI models

Our team consists of former senior federal, state & local public safety & homeland security officials along with technology experts in AI-driven video analytics. Headquartered in Las Vegas with a global presence & an R&D centre in the UK.

Top ranked technology by NIST

Our core team is comprised of graduates from MIT, UCLA, Oxford, Imperial College London, the University of Liverpool, and other world-renowned universities

How we do this

We apply artificial intelligence and machine learning onto existing IP CCTV systems to transform video content into actionable insights for rapid review with real-time alerting

The depth of our video analytics maximizes the ROI of an organization's video surveillance system with operational savings, enabling customers to:

- Identify people and objects at scale
- Take action with real-time alerts (e.g. a critical event)
- Rapidly analyze video content that can influence and optimize operations

Remark team dynamics

Established in 2016, Remark AI is a team of scientists, engineers and designers specializing in artificial intelligence video analytics that revolutionize the way clients utilise their surveillance systems.

A team of academics and professions where:

- 60% hold a masters or PHD degree from a renowned university
- 30% come from high tech industries
- 10% hold an associated research and development position within a university

We continue to win industry-leading awards for the speed and accuracy of our video analytics solutions that detect, analyze, and eliminate security risks.
